

Vacature: Senior Data Scientist

Kaios.ai, Fulltime, location Bedum and Groningen.

Do you want to join an international, and ambitious team in an AI startup and are you focused on getting things done? We are looking for a Data Scientist who has experience with putting data-driven solutions into production. We offer you the chance to work in an innovative start-up environment with a lot of freedom and responsibility.

You will be responsible for building end-to-end data-driven solutions for our customers in collaboration with our data engineers and full-stack developers. You must be comfortable with quickly prototyping solutions as well as putting these solutions into production with the help of your team members.

Tasks:

- You design end-to-end AI solutions in collaboration with our data engineers and full-stack developers, especially in the computer vision domain.
- You design complete machine learning/deep learning pipelines (data preparation, data processing, training, evaluation) and put these models in production

Requirements & qualifications

- MSc Data Science, Computer Science, Artificial Intelligence or similar qualifications.
- Demonstrable experience as a Data Scientist, especially with computer vision using deep learning or machine learning
- Experience with putting ML models into production, especially in the cloud (AWS, Google Cloud) and/or on embedded systems.
- Must have experience with the following: Python, Pytorch, Keras, Tensorflow, Scikit-learn, Open-cv, Scikit-image, Docker, Jupyter-notebook
- Fluent in English and preferably in Dutch.

Nice to have:

- Experience with processing multiple data sources such as (multi-spectral) image, GIS, and LIDAR data
- Experience with image segmentation and classification, object detection
- Experience with the following: R, (No)SQL databases, Full-stack development
- Ph.D. in deep learning/machine learning for computer vision or R&D experience in the same topic

Character:

- You are a self-starter, a problem solver and you take responsibility.
- You take initiative, but also know when to consult.
- You like to work in a team.
- You have a flexible mentality.
- You have a feeling for the commercial side of this business and the customer needs.

What we offer

We offer a job at a startup company in an innovative environment focussed on various markets, nationally and internationally. This offers opportunities to work for and with different customers and abroad if wanted. We are a small organization where there is room for new ideas and initiatives.

We aim to constantly evolve our existing products and work on building new ones. We have the ambition to grow rapidly. It gives you the chance to take responsibility and grow fast in your personal and professional skills, as well as in the organization. We are a young team with the drive to develop new solutions, which make Artificial Intelligence solutions indispensable all over the world!

We offer:

- An interesting and dynamic function
- In an informal and flat organization
- With a personalized approach
- Competitive salary
- 25 vacation days
- pension plan
- permanent contract

So if you are looking for a diverse job with lots of opportunities and room to explore a range of professional skills and interests, please let us know by sending your resume and a motivation letter to jobs@kaios.ai.

Explore the world of AI with Kaios.ai

Kaios.ai is a start-up in Artificial Intelligence solutions with national and international customers. Kaios.ai is founded in 2018 and working from Bedum (Groningen). We have a young team of enthusiastic specialists and we have the ambition to grow rapidly. With this growth, you will get the chance to fully develop your talents and explore, and perhaps define, the world of Artificial Intelligence.
